ABSTRACT

A method and system for providing wagering data for contest through a computer network provides live odds on a selected contest to a user terminal. Wagering data including race entry and race program data are transmitted to a user terminal through a computer network and displayed to a user by the user terminal. The wagering data are organizable and searchable. The user may select a wager on a contest and an interactive voice response code and cost of the selected wager are generated and displayed to the user. The wager may be placed by transmitting the code to a telephone wagering system through a telephone network or through the computer network.
